

In keeping with the Pacific theme, bright colours have been selected for the paintwork on walls throughout the Fale Pasifika.

And, to ensure the walls will keep looking fresh and be easy to maintain, Jasmax specified colours tinted into Resene Lustacryl for the interior walls of the academic wings and meeting house. This semi-gloss, waterborne enamel provides a tough, durable finish that can be wiped down easily.

Resene Lustacryl is non-yellowing, fast-drying and has a much lower odour than solventborne paints, making it ideal for commercial and residential locations.

Marketing manager Karen Warman says the versatility of Resene Lustacryl makes it well-suited to most interior applications including kitchens, laundries and bathrooms, as well as for trim and joinery, both inside and outside.

The Resene Total Colour System – with colour charts and The Range fandeck of swatches – makes it easy to choose the best shades and combinations of colours for the project. Fan decks are released annually and incorporate the latest colour trends.

For more information, visit your nearest Resene ColorShop or phone 0800 The Range (843 726). Website: [www.resene.co.nz](http://www.resene.co.nz).

**Above left:** Bright colours, such as Resene Torea Bay, taken from the Resene Total Colour System, have been used throughout the interior of the Fale Pasifika.

**Above:** The rich, bright Resene Sushi on the walls adds vibrancy and life to this informal meeting room.
