

# 31 stories in praise of Resene Masonry Filler

Masonry Filler is a decorative waterproofing system with unique bridging properties. It has a tough acrylic coating incorporating mica flakes which, when brushed on overlap like fish scales to bridge very large gaps.

The 31 story Williams Building which dominates downtown Wellington was coated in 1975 with Masonry Filler.

"After 6 years the Masonry Filler Coating is still in excellent condition with no deterioration or ingress of water. Williams Construction are delighted with the look and performance of Masonry Filler after 6 years facing the Wellington elements."

Masonry Filler has also been widely used for coating interior concrete columns, beams and walls — more economically than plastering. Available from Resene Color Shops and Better Decorator Stores.
